

Amazon Sales Analysis — Project Notes

Project-01-Amazon-Sales | Documentation for portfolio / project submission

1. Project Overview

This project analyzes Amazon product data and presents key product-count and customer-rating insights through pivot-based analysis and a final dashboard created in LibreOffice Calc.

2. Project Objectives

- Understand the distribution of products across categories.
- Identify categories/products with higher product counts.
- Compare average ratings across categories.
- Create a concise dashboard suitable for portfolio presentation.
- Maintain an editable analysis workbook and an Excel-compatible version.

3. Workbook Structure

Sheet / Folder	Purpose
amazon	Source/raw Amazon sales-product data used for analysis.
Pivot_Product Count	Pivot analysis used to summarize product counts and identify the top 10.
Pivot_Average_Rating	Pivot analysis used to calculate and compare average ratings by category.
Dashboard	Final presentation page containing KPI cards and two charts.
Datasets	Original/source dataset files.
Dashboard folder	Final ODS, XLSX and one-page PDF outputs.
Notes	Project documentation and notes.
Images	Project screenshots/visual evidence.

4. Dashboard KPIs

- **Total Products:** 1,465
- **Average Rating:** 4.1
- **Top Category:** USB Cable — 233

5. Dashboard Visuals

- **Top 10 Product Count:** horizontal bar chart showing the categories with the highest product counts.
- **Top 10 Average Rating by Category:** horizontal bar chart comparing the highest average-rated categories.
- Data labels were added to make the chart values easier to read.
- Dashboard gridlines were hidden to give the final page a cleaner presentation.
- The final PDF was configured as a single landscape page.

6. Key Observations

- USB Cables is the leading category in the product-count analysis with 233 products.

- The highest average rating shown in the dashboard is approximately 4.62 for Tablets.
- Most categories in the top-rated group are clustered around the 4.4–4.5 rating range.
- Product count and average rating represent different dimensions of the catalog; a category with many products does not automatically have the highest rating.

7. Final Deliverables

- **Amazon_Sales_Analysis.ods** — master editable LibreOffice workbook containing all four sheets.
- **Amazon_Sales_Analysis.xlsx** — Excel-compatible copy of the workbook.
- **Amazon_Sales_Dashboard.pdf** — final one-page dashboard for easy viewing/sharing.

8. Recommended Portfolio Folder

Project-01-Amazon-Sales / Dashboard / Amazon_Sales_Analysis.ods, Amazon_Sales_Analysis.xlsx, Amazon_Sales_Dashboard.pdf

Project-01-Amazon-Sales / Datasets / original dataset

Project-01-Amazon-Sales / Notes / this project notes PDF

Project-01-Amazon-Sales / Images / selected project screenshots

9. Notes for Future Improvements

- Create shorter, presentation-friendly category labels while preserving the original raw category field.
- Add more KPIs such as price, discount, review count or sales-related measures if those fields are available in the source data.
- Add interactive filters/slicers if the project is later rebuilt in a tool such as Power BI or Tableau.
- Keep the raw dataset unchanged and document any future cleaning/transformation steps.

Project status: Dashboard completed, workbook saved in ODS and XLSX formats, and final dashboard exported as a one-page PDF.
